— A BRAND BY SF MARINE

THE STORY OF SF PRO

SF PRO was created from the experience and technical background of SF Marine, a Monaco-based company founded in 2005 and active in the marine industry through the supply of technical products, equipment and professional solutions for yachts and vessels.

Over the years, working closely with crews, shipyards, yacht managers and marine professionals highlighted a recurring need: surface maintenance required more than individual cleaning products. It required a structured approach, reliable products and solutions capable of meeting the standards expected in the yachting industry.

In 2016, SF PRO was launched as a dedicated SF Marine brand focused on professional cleaning and maintenance. The objective was to create a more specialised identity around surface care, while benefiting from SF Marine's existing experience, network and understanding of professional marine environments.

SF PRO

MARINE SURFACE CARE SYSTEM

Clean

Remove dirt, grease and surface contamination.

Repair

Bring back the surface's original appearance and finish.

Protect

Help preserve the surface and maintain the result over time.

professional system for marine surface care.

CLEAN

PROFESSIONAL CLEANING SOLUTIONS FOR MARINE ENVIRONMENTS

SF PRO cleaning solutions are especially are specially developped for the marine luxury environment.

HIGH
CLEANING
PERFORMANCE

BASED ON NATURAL
FORMULAS
(SELECTED PRODUCTS)

LOW DOSAGE.
HIGH
EFFICIENCY.

Due to their high concentration of active raw materials, SF PRO products deliver high cleaning performance with a low dosage, helping reduce product consumption while maintaining professional results. At the same time, selected formulas incorporate biodegradable components, combining efficiency with a more responsible approach to marine surface care.

PARTNERSHIP

VIRTUS SINCE 1957

Virtus is a leading brand in the car care and maintenance industry, with over 65 years of experience in researching and developing innovative products. Our passion for nanotechnology has allowed us to create a range of high-quality professional products used worldwide. Our car polishing products use the properties of nanoparticles to ensure impeccable hologram-free results, while also protecting the environment. By using cutting-edge technical tools, Virtus polishing centers are able to offer their customers a superior car care experience. Choose Virtus for high-quality products developed with advanced technologies.

Through the ALLCHEM x SF PRO collaboration, ALLCHEM's formulation expertise has been combined with SF PRO's knowledge of the yachting industry to develop a range specifically adapted to professional marine surface care.

PROTECT

PROFESSIONAL PROTECTION SOLUTIONS FOR **MARINE ENVIRONMENTS**

SF PRO protection solutions are especially selected for the marine luxury environment.

PRESERVES
SURFACE VALUE

BARRIER AGAINST
MARINE ENVIRONMENT

LONG-LASTING
PREMIUM FINISH

They are developed to preserve high-value marine surfaces and extend their appearance over time. By creating an advanced barrier against UV exposure, salt, water, stains, light scratches and environmental contamination, they help reduce wear and simplify maintenance.

Our solutions combine physical protection, hydrophobic surface technology and customisation options to maintain a premium finish while allowing to protect or transform the appearance of selected areas.

APPLICATION GUIDE

SF PRO PRODUCTS APPLICATION GUIDE FOR **MARINE ENVIRONMENTS**

SF PRO products are designed to deliver professional results when used with the correct application method. Surface type, product dosage, working time and application technique all influence the final performance.

Our approach is inspired by Sinner's Circle, a simple principle showing that cleaning and surface-care performance relies on the balance between four key factors:

CHEMISTRY

The right product and concentration for the surface and contamination.

MECHANICAL ACTION

The appropriate brush, pad, cloth or polishing action.

TIME

Allowing the product sufficient contact or working time.

TEMPERATURE

Environmental and surface conditions can directly affect performance.

These factors work together. When one is reduced, the others may need to be adjusted to maintain the desired result.

ONE METHOD. THREE APPLICATION STAGES.

CLEAN

REPAIR
